CREATIVE RESEARCH

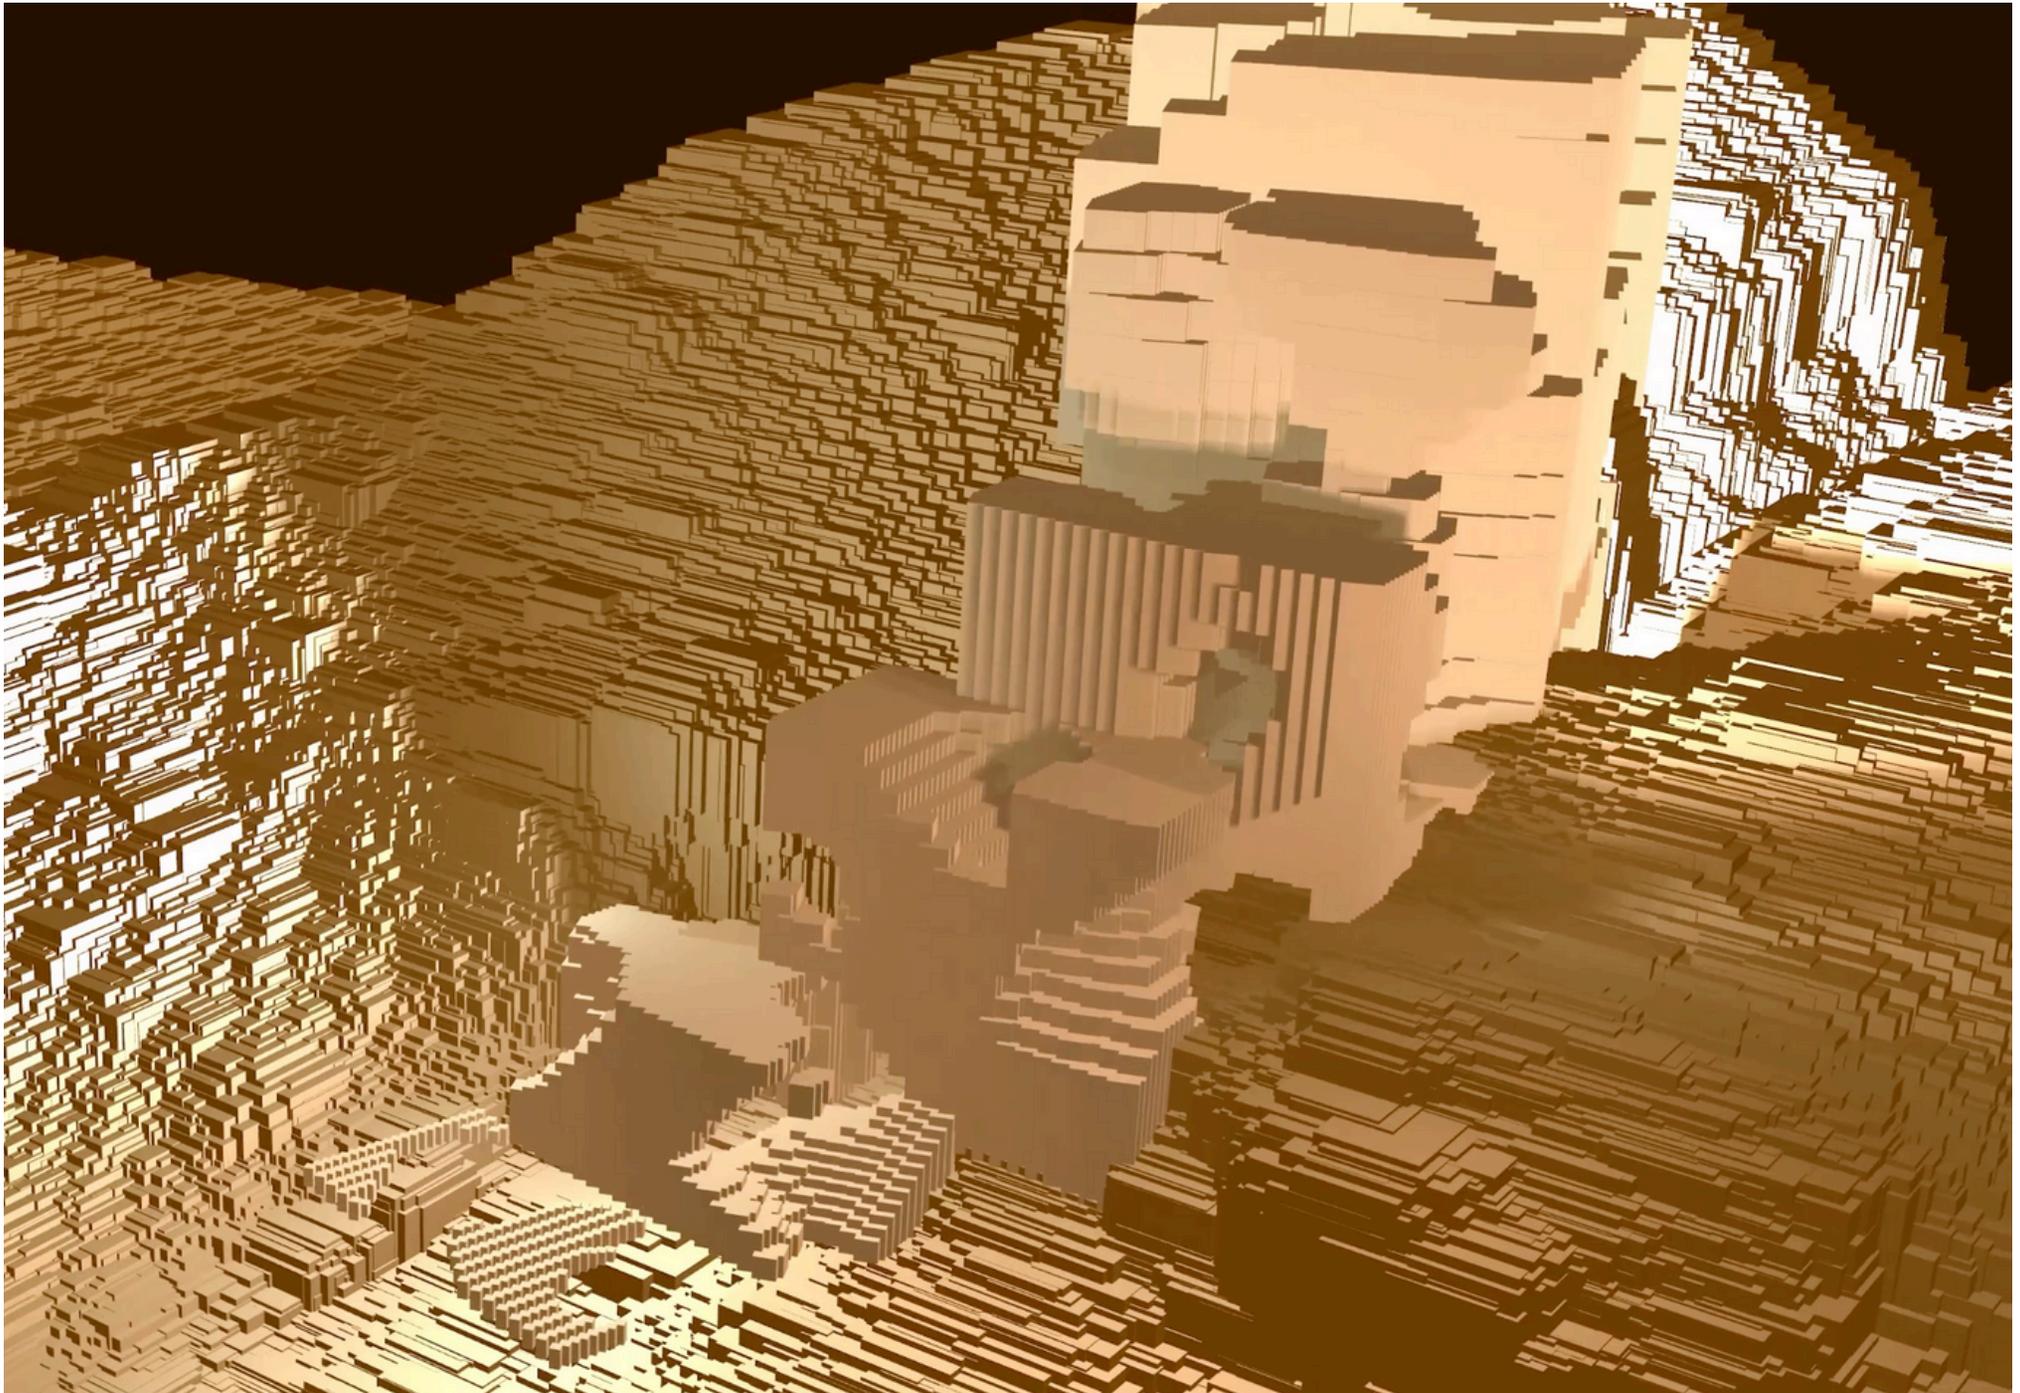

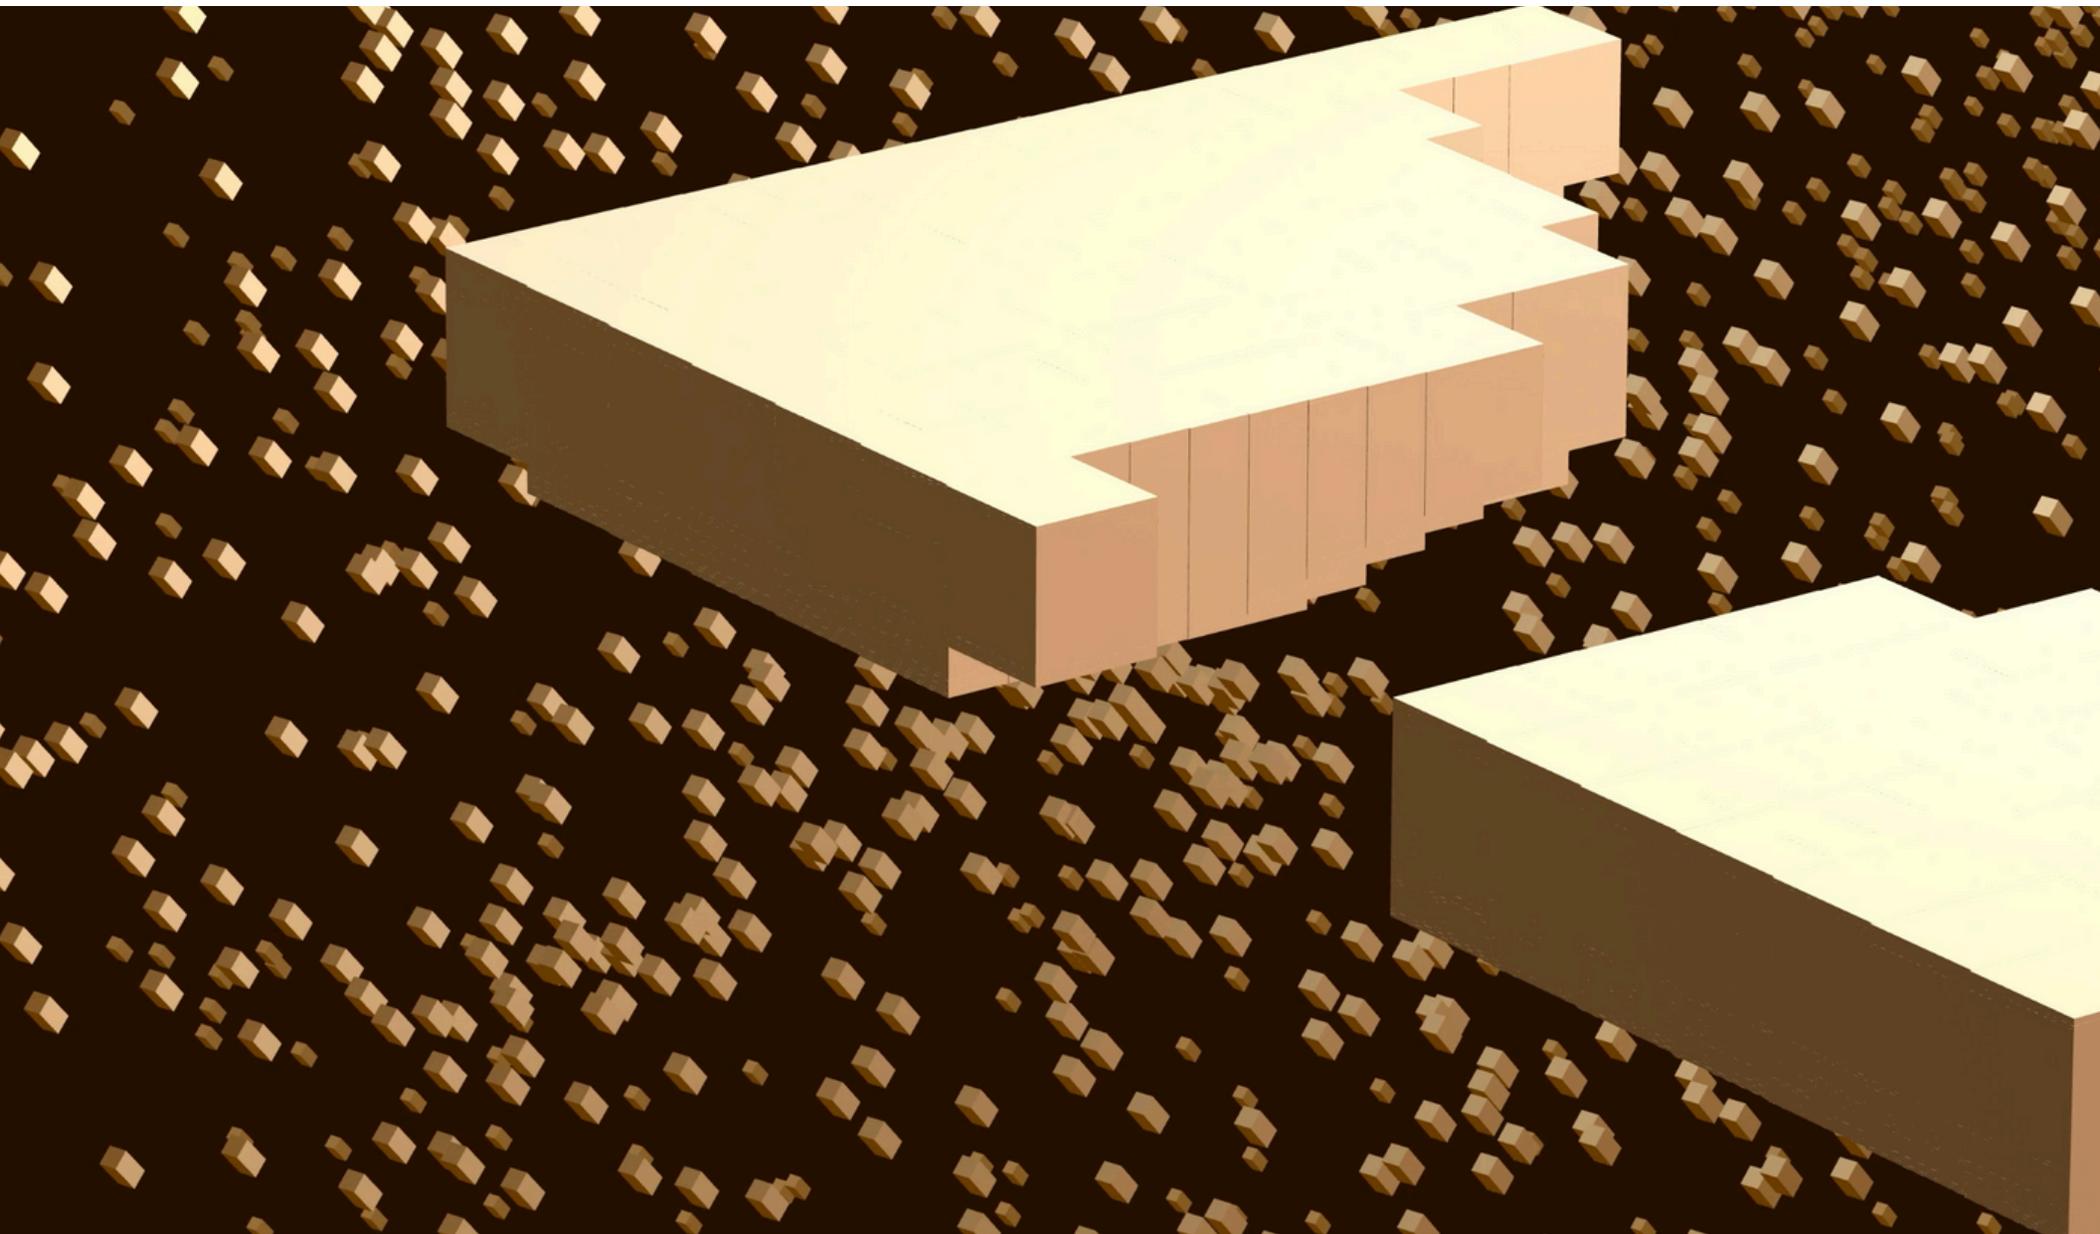

THE CARRY ROOT

Realized through interactive exhibitions, this socially engaged project reimagines digital storytelling as a space for collective memory, care, and quiet attention. At its center is Carry, a conversational agent shaped by a community of core contributors—women navigating intergenerational displacement and the complex work of belonging.

Describing herself as a “StoryCatcher,” Carry offers personal narratives via headphones while inviting guests to share their experiences. Her role recognizes our impulse to build technologies of connection, even as it confronts the entrenched systems of extraction that shape much of AI’s development.

CARRY ON

This experimental animation brings together three generations of data captured through machine vision techniques, including scans of the artist's mother and children.

Composed using volumetric capture, 3D modeling, and digital animation, the piece abstracts the algorithmic sources, placing the family in a kind of suspended animation. The work offers a meditation on archives, memory, and loss.

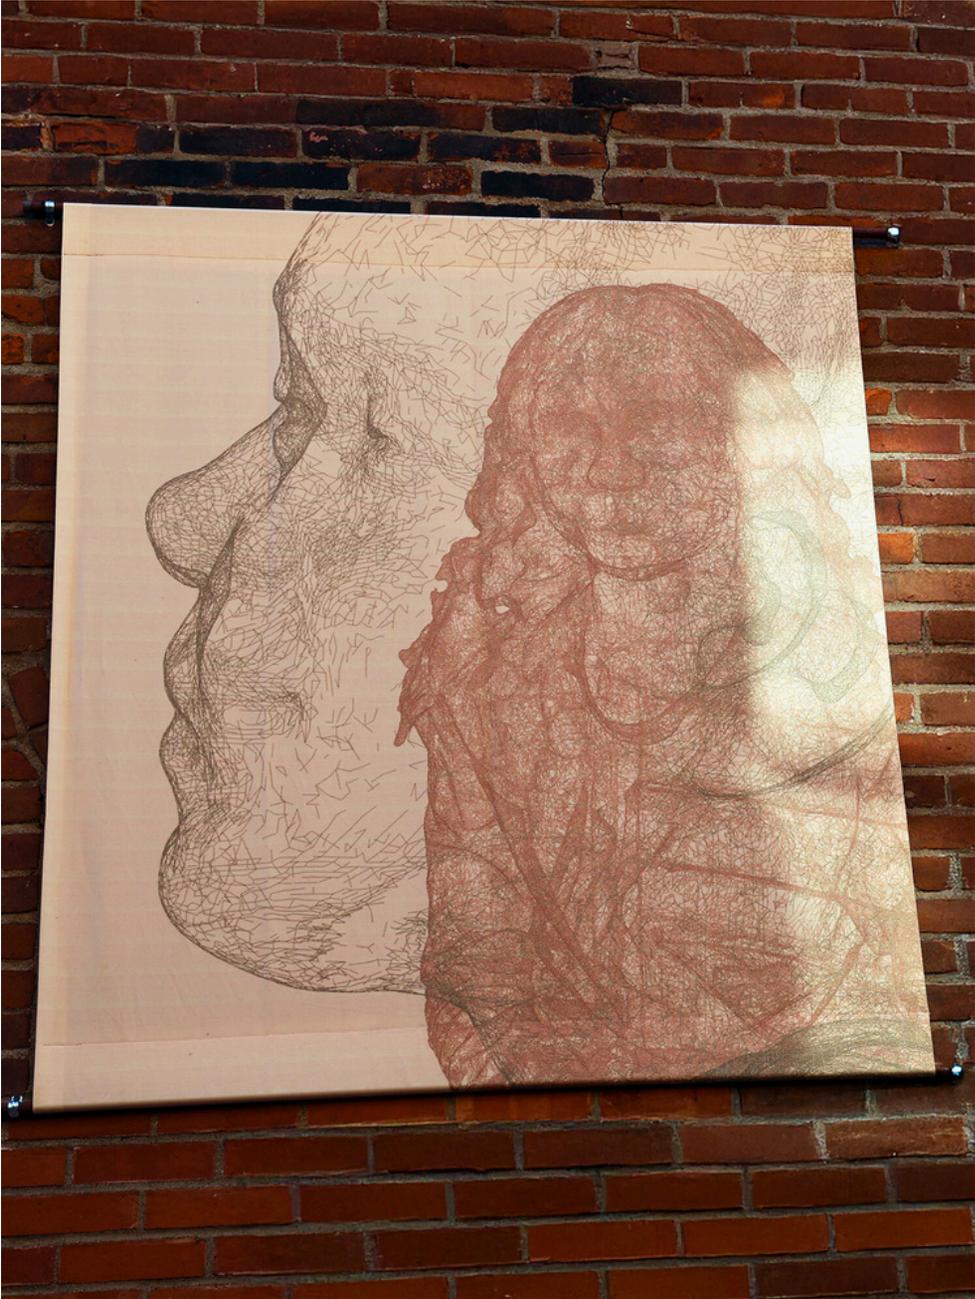

CATCHINGS

Through sculpture and computational rendering, this body of work explores the complexities of heritage, labor, and technological advancement.

Digital wireframe portraits drawn from maternal lineage take shape as textile banners, mapping the contours of memory and presence across generations. Each piece combines computational modeling and digital printing with traditional craft techniques, allowing intimacy and care to emerge through abstracted visual forms.

WITH WHAT?

A virtual reality experience invites viewers into a mountainous terrain, collecting fragments along the way. They explore a centralized basin dotted with raw, clay-like replicas of personal artifacts. Monumental figures emerge from the rocky perimeter. Once transported to a secret library, viewers see their collected pieces as fully rendered physical replicas.

The work was developed through community workshops in library and educational spaces, where participants learned to create digital twins of their familial objects and reflect on what gets lost in translation.

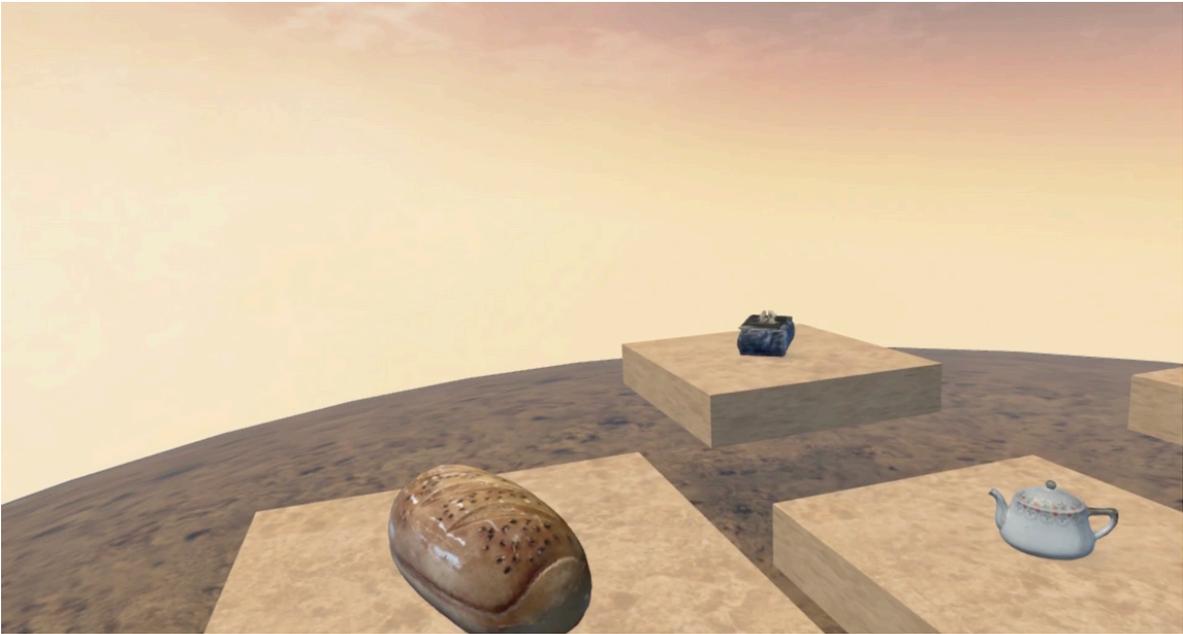

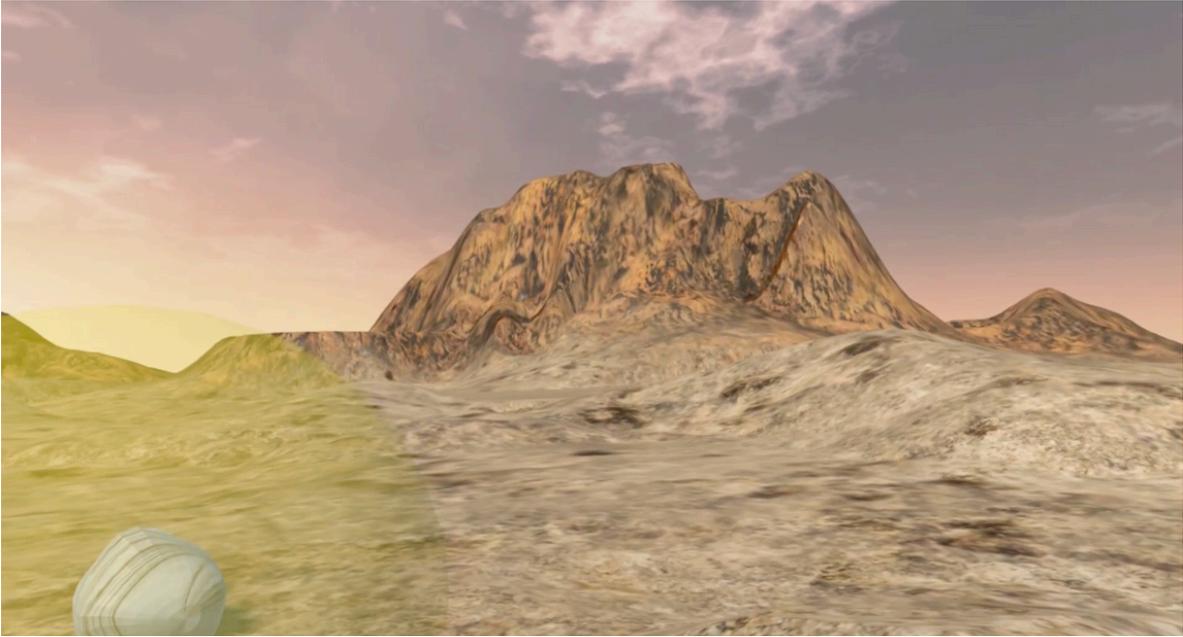

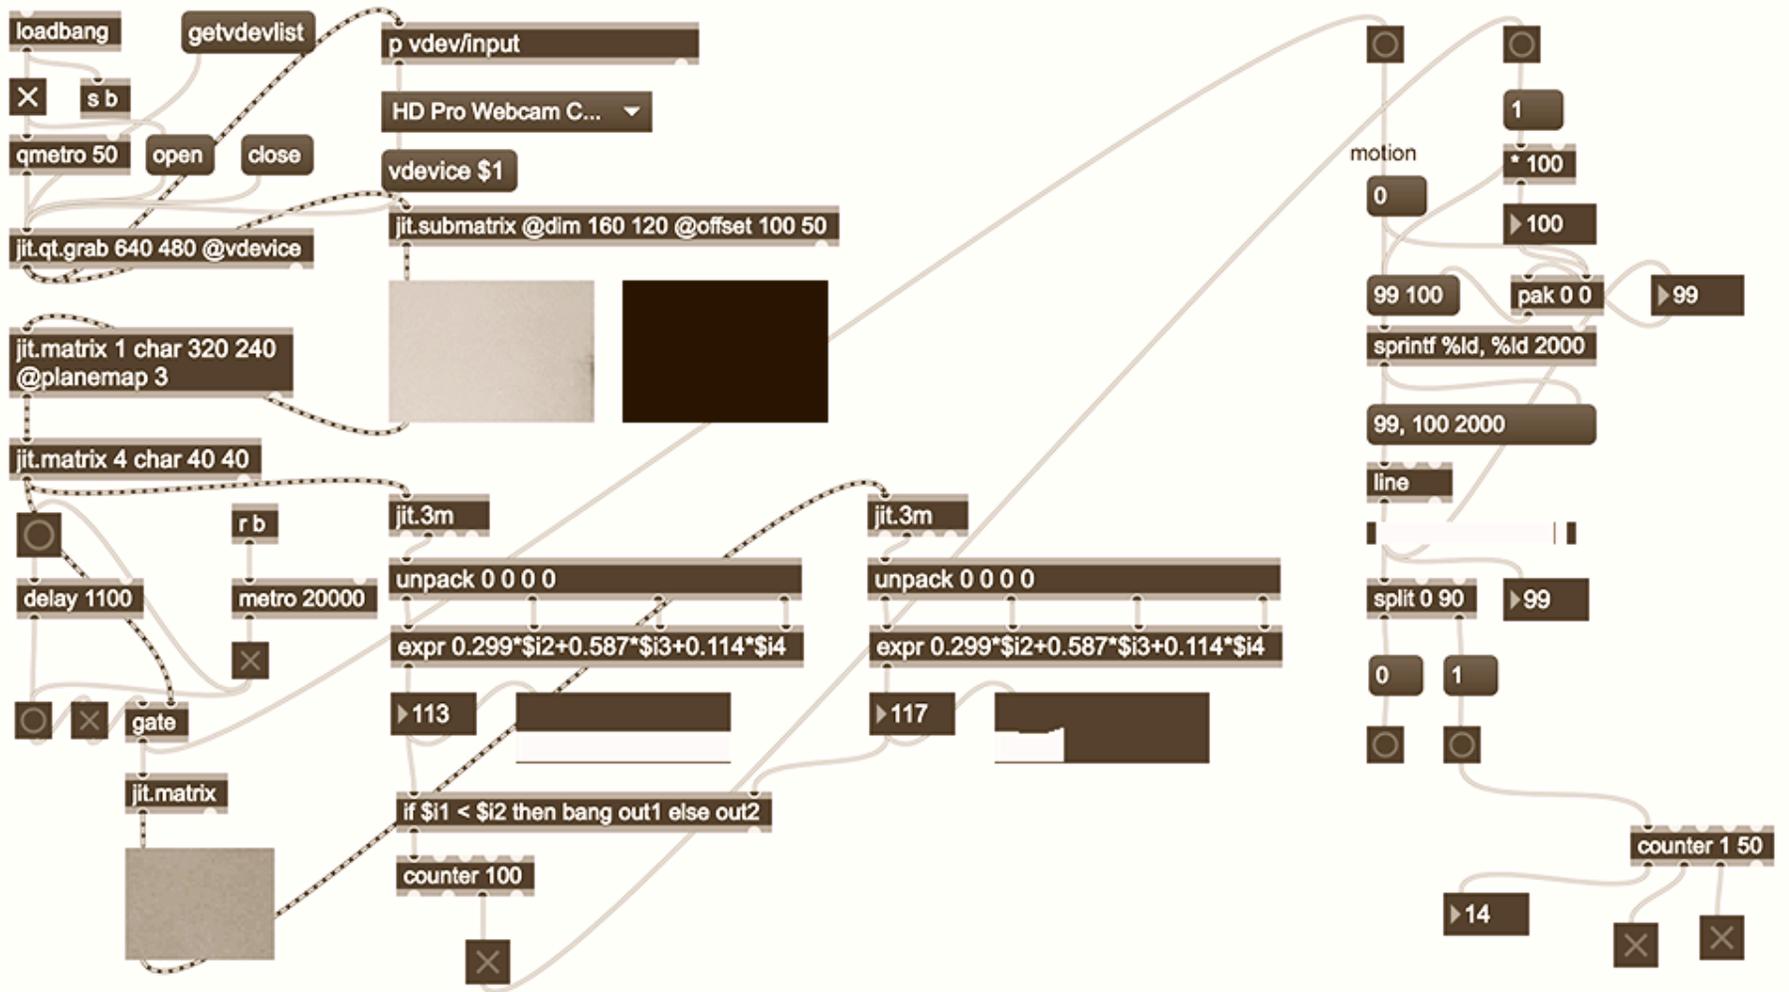

CLOUD OF WHITENESS

This interactive installation was conceived as a microcosm of our current and trans-historical political climate.

Construction materials – brick, canvas, rope, and repurposed motors – are layered against the seemingly invisible technologies of digital surveillance. Custom software and physical computing activate a handmade cradle dropping theatrical snow. Viewers engage the work by building or deconstructing brick structures.

JOSE EMILIANO MATA

PhoneTime.19

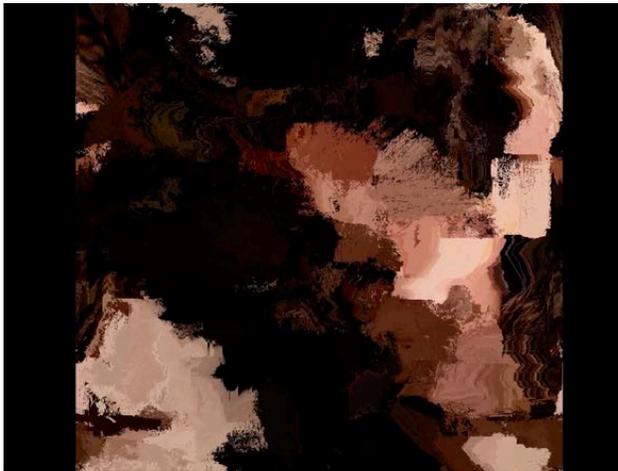

Abstract shapes represent that even when I am doing one task, my mind is all over the place. With the shapes on top of one another, it gives the idea that it is a representation of myself sleeping, working, daydreaming, and on my phone.

AIDAN HEALY

Particle Self

This project is an interactive multimedia visualization that explores the relationships between time spent sleeping, working, and being mindful over five days. The data is visualized through animated circles, with each circle representing one of the three categories

LENI WIEGAND

Pixel Deformation

This piece explores work, sleep, and rumination through data-driven visual abstraction. I deconstruct my own face, distorting it in ways that express the impact of overwork. The fluctuating size of facial elements—growing and shrinking—symbolizes the dissociation that occurs when my mind feels overwhelmed. The distorted pieces represent the numbness of overthinking, visually capturing the impact of mental overload on my sense of self.

A p5.js net art project visualizing the amount of time the artist spent listening to music each day as mathematically representational musical notes (and tones).

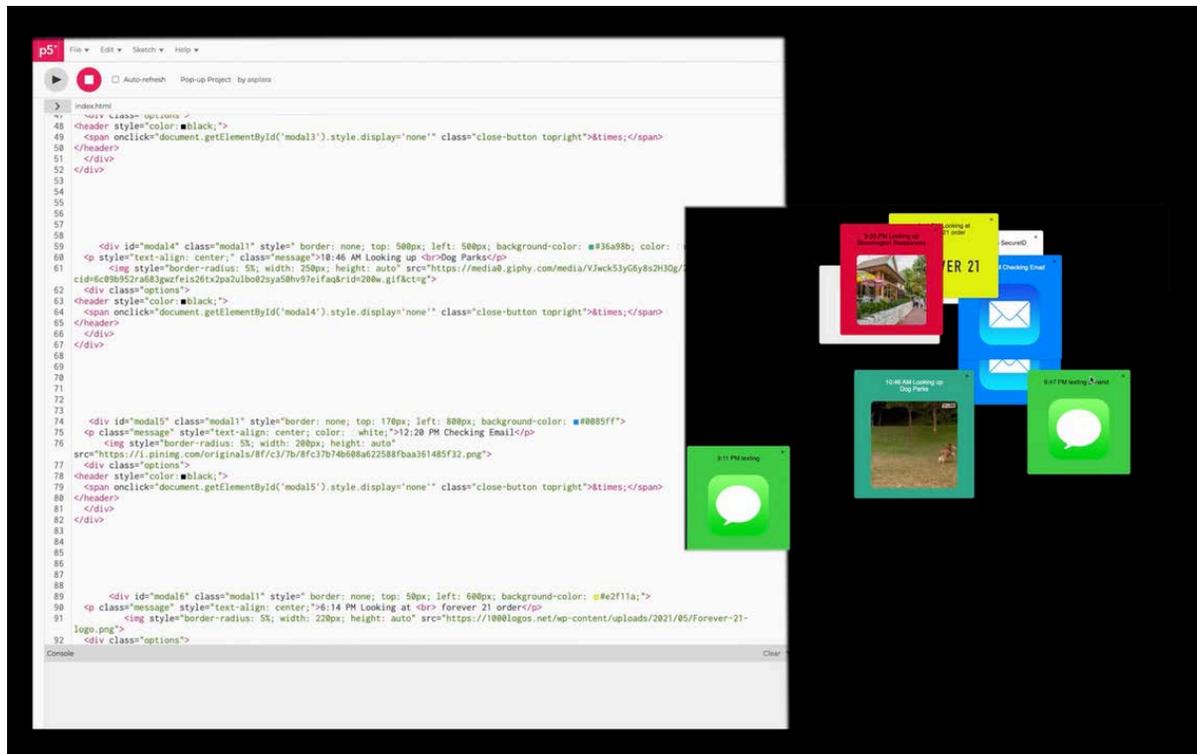

The image shows a screenshot of a p5.js editor interface. The top bar includes the p5.js logo, a menu (File, Edit, Sketch, Help), and the language (English). Below the menu is a play button, a stop button, and a checkbox for "Auto-refresh". The main workspace is divided into two panels: "sketch.js" on the left and "Preview" on the right. The "sketch.js" panel contains the following code:

```
157
158 //A2
159 rect(267, 230, 35, 2);
160 ellipse(284, 230, 25, 20);
161 rect(272, 230, 2, 50);
162
163 //G#2
164 ellipse(364, 240, 25, 20);
165 rect(352, 240, 2, 50);
166
167 rect(376, 230, 19, 1);
168 rect(376, 225, 19, 1);
169 rect(381, 220, 1, 17);
170 rect(388, 220, 1, 17);
171
172 //C#2
173 ellipse(452, 280, 25, 20);
174 rect(440, 280, 2, 50);
175
176 rect(465, 265, 19, 1);//82
177 rect(465, 260, 19, 1);//77
178 rect(470, 255, 1, 17);//72
179 rect(477, 255, 1, 17);//72
180
181 //G1
182 ellipse(510, 310, 25, 20);
183 rect(520, 260, 2, 50);
184 }
185
```

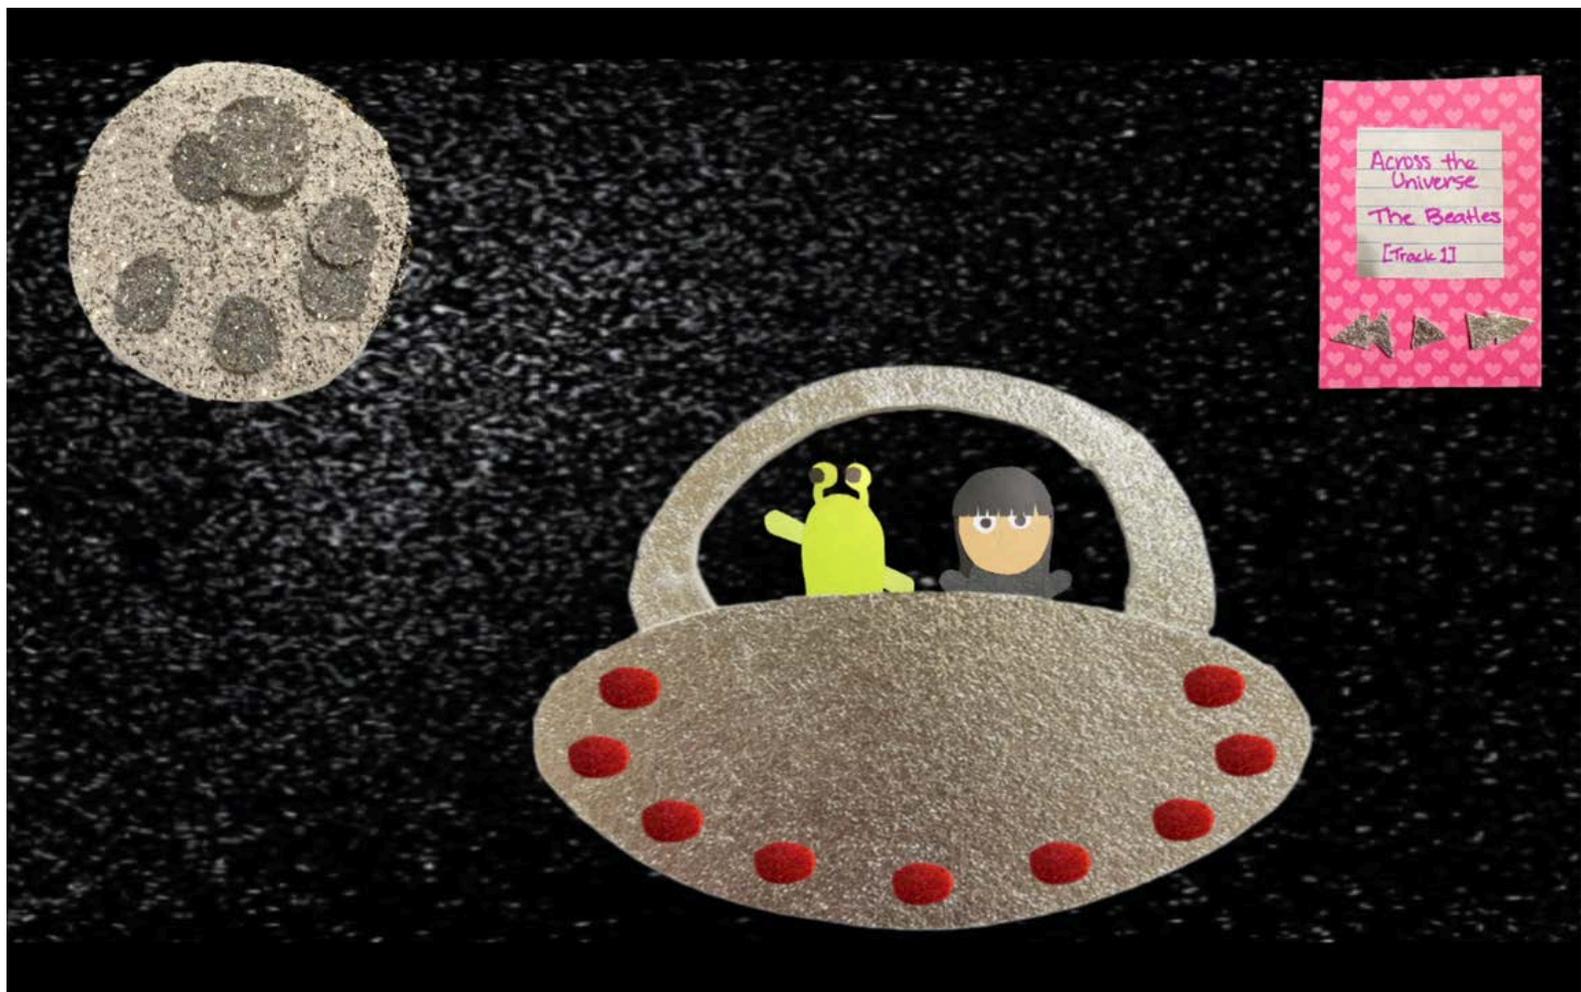

The "Preview" panel shows a musical staff with two staves. The top staff has a treble clef and a key signature of one sharp (F#). The bottom staff has a bass clef and a key signature of one sharp (F#). The notes are represented by black circles with stems, and some have sharp symbols (#) above them. Below the preview panel is a "play song" button and a mouse cursor.
